## Marine Conservation Agreements

### *A Practitioner's Toolkit*

The toolkit was developed by The Nature Conservancy and partners to provide information to local, national, and international organizations regarding Marine Conservation Agreements (MCAs) – a promising strategy to protect ocean and coastal biodiversity from degradation and depletion.

The toolkit helps organizations determine:

- What MCAs are;
- When MCAs can help abate threats to ocean and coastal species, habitats, and ecosystems; and
- How to plan and proceed with MCA projects.
